Story Line.

Ananya is in 10th grade. She recently joined girls who code, even though she has no idea how to code.

Should she join hackathon?

Yes -> Ananya's heart beats in her chest. Nervously, she clicks on the link. Ananya is excited, but scared.

(Screen dims, then lightens again)

It is Saturday, 9:00 AM. Ananya's alarm just rang but she is still very sleepy from the week of school that just passed. Should she **sleep in, or wake up?**

Sleep in->

Ananya presses the snooze button. When she wakes up an hour later, she realizes that the hackathon started at 9! Should she still try to join or is it too late?

Join-> After filling out the confirmation form, she plummeted into a field of experienced college students! Woah, there are no high schoolers! Should she lie or tell the truth in the introductions?

Too late, better things to do-> Ananya's pride got the best of her. She spends the weekend regretting what she did-> **THE END screen**

Wake up->

Ananya grudgingly wakes up, remembering her wise brother's saying about the early coder getting the facebook job. Whatever that means. She sees a flurry of email notifications on her screen and realizes- the hackathon starts in a few minutes! **What should she do?**

Join-> After filling out the confirmation form, she plummeted into a field of experienced college students! Woah, there are no high schoolers! **Should she lie or tell the truth in the introductions?**

Lie-> Ananya is apparently a junior at NJIT who is experienced in data science, C++, and Java. Shhh, no one can tell the difference! She immediately gets 3 direct messages asking to form a team. **What should she do?**

Cmon, she can handle it! -> Ananya was not able to handle it and everyone on the team depended on her! Too much

embarrassment to continue and no teams left to join, she quits. ->

> THE END screen

Be humble, find a team of newbies>

Tell the truth-> Ananya tells the truth about herself. Ananya messages 3 other high schoolers who had full teams. However one named Salwa responded. Should she join Salwa? Or go solo?

Join Salwa-> They both come up with an incredible Choose your Own Story idea. Ananya decides to use Python to implement this using an if/else structure. Should she continue to use Python or opt for a web solution.

Python: Ananya finished the project on a python terminal. Turns out, it wasn't enough to wow the judges and although they finished it in time, they felt they could have done more. > THE END screen

Web solution: Because the web is made of hyperlinks, they see that it will work well with the 'many worlds concept'. They begin writing their own stories, and Salwa designs a webpage. They even draw their own pictures. They submit the project with both the terminal version (for the geeks) and the web version. They don't know if they will win but they are proud of their first hack and excited for the next! > THE END screen

Solo-> Ananya didn't have enough skills to make a finalized product. She misses the submission deadline and cries. -> > THE END screen

Nah-> Ananya sulks around for the rest of the day. She feels a pang of guilt at the next Girls Who Code meeting and is overwhelmed by her friend's cool projects. Maybe next time? -> THE END screen

No -> Ananya doesn't join. She spends the whole day thinking about what could have happened if she did.. She cries herself to sleep. -> THE END screen
